

## PRE-PACKAGED GATE KIT

- With the DFS Gate Kit, you can build a vinyl fence gate onsite and to the size you need in 15-30 minutes. This means no more building gates offsite, only to figure out that it does not fit.
- The DFS Gate Kit comes with adjustable stainless steel hinges that make setting the gate easy, avoiding large gaps and latch strikes that don't match. The easily adjustable stainless steel hinges ensure the customer will be able to enjoy a gate that closes, even if their yard settles and things shift. The hinges are self-closing, which will assist in the gate always closing behind you.

- To establish a sturdy gate, we included aluminum inserts to ensure the gate is mounted to something solid for added longevity and durability.
- The DFS Gate kits are available in white, tan, grey, adobe and dark maple. The kit includes everything you need to make a perfect vinyl fence gate.

\*The kit will allow you to create a gate that fits up to six feet wide

\* Fence panels are not included as the number is dependent on the width of the gate you are building.
