

DFS POST LEVELLING COLLARS (PLC)

DFS post levelling collars are simply the best post-to-pipe pole levelling system on the market today. Our PLC allows you to install your steel posts without using concrete.

SOME FACTS

- Stronger one-piece design
- Maximum adjustability—slot extends to outer diameter
- Quicker and more accurate than two-piece design
- Flexible enough to fit over slightly “mushroomed” pipe
- Internal ridge keeps it from sliding during installation
- Easy to repair the fence and replace the posts since they are not concreted into the ground
- Cleaner—no left over dirt tailings after post installation. Save money on labour, concrete the expense to auger holes and remove the dirt tailings.
- Quicker install, no need to wait for concrete to set and hope your posts do not move as the concrete dries.

Your customers will be pleased with a clean, damage-free installation—without the need of a skid steer, auger or concrete mixer. You will save money on vinyl because the PVC post length stays above grade—a six-foot fence requires only a six-foot PVC post. Our post collars have been proven in some of the harshest climates and most difficult soil conditions in Canada.
